GROUP PROGRAMS

Thinkahead's remedial and learning support programs are educational interventions designed to help your child with their academic progress, confidence and depth of understanding.

Our remedial educators target the specific areas that your child is struggling with. We provide extra tutoring to help your child catch up on material they may have missed or not understood in the past. Remedial support can assist if your child is performing below grade level or is at risk of falling behind. Each session is 1:1 with an emphasis on scaffolding to develop confidence and skills, as well as the use of games and hands-on activities to support discussion and demonstrated learning.

Learning support programs encompass a range of interventions designed to support your child's overall academic progress. Literacy and numeracy skills are the key areas we look at from pre-school, K-6 and 7-12. This might include things like developing reading and writing, understanding number and mathematical thinking, study skills training, time management strategies, or help with organisation and planning. Learning support can be useful for students who are struggling with a particular subject, but it can also be helpful for students who simply need extra guidance and support in managing their workload and staying on track.

The steps involved in our remedial and learning support program varies depending on the specific needs and circumstances of your child. However, here are some common steps we incorporate in our services:

- **Initial Assessment:** The first step is usually to assess your child's strengths and weaknesses, as well as their learning style and preferences. This may involve tests, observations, or interviews with both the child, parent and at times the teachers. Included in this assessment is a discussion with parents as to what they are hoping to achieve.
- **Goal setting:** Based on the assessment, specific goals are then set for your child to work towards. These goals are measurable, achievable and realistic.
- **Planning:** Once the goals have been set, a plan is created for how to achieve these goals. This often involves identifying specific skills or concepts that need to be addressed, as well as selecting appropriate instructional strategies and resources.
- **Implementation:** The plan is put into action, with your child receiving targeted instruction and support to help them meet their goals.
- **Monitoring and Evaluation:** Throughout the remedial or learning support process, your child's progress is monitored and evaluated to ensure that they are making progress towards their goals. Adjustments to the plan is made as needed based on your child's performance and feedback.

At Thinkahead the key to effective remedial and learning support is the tailoring of our interventions to the specific needs and circumstances of the child, and the data-driven approach to ensure that progress is being made towards measurable goals.

Our remedial and learning support program can have numerous benefits such as:

- **Improved academic performance:** By providing targeted instruction and support, remedial and learning support can help students improve their grades, test scores, and overall academic performance.
- **Increased confidence:** When students receive the extra help and support they need to succeed, they often feel more confident in their abilities and more motivated to continue learning.
- **Better retention:** Students who receive learning support are more likely to stay in school as they are better equipped to handle the academic challenges they face.
- **Enhanced skills:** Learning support can help students develop important skills such as critical thinking, problem-solving, time management, and study skills, which can benefit them both academically and in their future careers.
- **Personalized learning:** Our programs can be tailored to meet the unique needs and learning styles of individual students, allowing them to receive instruction and support that is tailored specifically to them.
- **Improved social and emotional well-being:** By helping students succeed academically, remedial and learning support can also have a positive impact on their social and emotional well-being. When students feel successful and confident in their abilities, they are more likely to have positive relationships with their peers, teachers, and families.
